

ADITYA BHAT | Senior Data Engineer

Bengaluru, India | adithya0705@gmail.com | +91 8277223024 | [linkedin.com/in/adityabhat0705](https://www.linkedin.com/in/adityabhat0705)

PROFESSIONAL SUMMARY

Data Engineer with 7+ years of experience designing, data modelling and optimizing cloud-based data pipelines, ETL frameworks, and analytics platforms on AWS.

TECHNICAL SKILLS

- **Cloud & Data Services:** AWS Glue, Amazon Redshift, AWS DMS, Amazon Athena, AWS Lambda, Amazon S3, AWS Step Functions, Amazon SQS, DynamoDB, Amazon QuickSight
- **Programming & Frameworks:** Python, PySpark, SQL, Bash, R, Base SAS
- **ETL & Data Warehouse:** Apache Iceberg, Redshift, Snowflake, Hive, Teradata, Ab Initio
- **Databases:** Oracle, Aurora MySQL, Postgres
- **CI/CD, DevOps & Versioning:** AWS CloudFormation, Docker, AutoSys, Code Commit, Git, Bit Bucket
- **Visualization:** QuickSight, Power BI, ArcGIS

PROFESSIONAL EXPERIENCE

Data Engineer III | CLOUDWICK- Bengaluru, India

APR 2024-Present

- Reverse-engineered Power BI transformation logic and rebuilt semantic layer in AWS Glue, centralizing business logic and improving data governance across enterprise reporting systems.
- Optimized a daily AWS Glue Python shell ETL from 10 minutes to 1 minute (90% reduction), feeding 26 downstream reporting views — improving data freshness and cutting Glue compute costs.
- Designed stateful, event-driven ingestion framework using S3, SQS, and DynamoDB to orchestrate incremental Apache Iceberg loads with MERGE-based upserts for data synchronization.
- Led an Oracle-to-Redshift migration via AWS DMS for critical tables, including a 61GB / 452M-row primary table and a 20GB / 20M-row work-order table, with daily CDC replication and minimal downtime; tables compressed to 18GB and 7GB respectively in Redshift.
- Built and maintained custom Python utility package for environment migration, query lifecycle management, and automated data downloads, eliminating repetitive manual work across the team.
- Migrated Excel-based reporting workflows to optimized Redshift Materialized Views, enabling scalable Tableau dashboard consumption.
- Developed a proof-of-concept AI agent for pre-sales demonstrations to help engineers from SQL backgrounds smoothly transition into PySpark and Python development.
- Partnered with engineering leadership on cloud architecture decisions while serving as the primary technical contact for a 7-member data engineering team; mentored new hires, hosted knowledge-sharing sessions including PySpark and Apache Iceberg.

Data Engineer II | CLOUDWICK- Bengaluru, India

APR 2022-Mar 2024

- Built automated workflows using AWS Step Functions, Lambda, and DMS to restore and migrate historical RDS backups into Redshift with full data validation
- Developed reusable Lambda utilities for S3 file routing, QuickSight refresh automation, and RDS lifecycle management, reducing operational overhead.
- Collaborated in deploying ArcGIS Enterprise on AWS and developed geospatial dashboards for RERA land valuation analysis, enabling data-driven urban planning insights
- Built PySpark-based ingestion framework to extract Salesforce objects via JDBC and publish into Athena external tables, establishing unified CRM reporting layer
- Developed interactive Amazon QuickSight dashboards integrated with Amazon Athena for real-time analytics.

Data Engineer I | CLOUDWICK- Bengaluru, India

DEC 2021-MAR 2022

- Developed and automated KPI creation pipeline through API integration, improving deployment efficiency by 100%.
- Optimized and converted Aurora MySQL analytical queries to Athena-compatible syntax, reducing query latency.
- Built data validation framework to alert on missing lookup values and referential integrity gaps, preventing downstream data corruption.
- Managed CloudFormation-based migration of 500+ AWS resources with comprehensive post-migration validation to ensure infrastructure integrity.

Application Development Analyst | ACCENTURE- Mumbai, India**DEC 2019-Nov 2021**

- Contributed to cloud migration initiative, converting legacy SAS code and Ab-initio graphs to PySpark for scalable Databricks/Cloud environment.
- Collaborated with Data Scientists to architect feature engineering pipelines and implement complex business logic using Spark DataFrame API.
- Engineered automated data profiling, validation, and comparison frameworks ensuring high data integrity for R&D models.
- Implemented data ingestion into the Hadoop ecosystem using Sqoop/Hive and S3-to-Snowflake pipelines.

Associate Software Engineer | ACCENTURE- Mumbai, India**AUG 2018-Nov 2019**

- Maintained and monitored end-to-end data pipelines using AutoSys, performing root-cause analysis on data drift and pipeline failures to ensure 24/7 availability
- Developed custom R scripts for PDF parsing and automated audits, reducing manual verification efforts from weeks to days.
- Automated complex multi-stage SAS and Pyspark workflows by developing Bash wrapper scripts.

EDUCATION

RAMAIAH INSTITUTE OF TECHNOLOGY - BENGALURU, INDIABachelor of Engineering, Telecommunications Engineering, CGPA- **8.28****2014-2018****L.E.T PU COLLEGE (Science- PCMB) - 90.67%****2012-2014****CERTIFICATIONS & AWARDS**

- AWS Certified: **Specialty:** Machine Learning; **Associate:** Data Engineer, Solutions Architect, Developer
- Outstanding Contribution Award - 2023 | Cloudwick, The Cloudwick Compass Award -2025
- Published a paper in IEEE on Factors affecting Real Estate using Machine Learning.
<https://ieeexplore.ieee.org/document/8524289/authors#authors>
- Oracle Certified in Java.
